

SHANTANU KUMAR

+91 6201984324 — kumarshantanu4403@gmail.com — shantanu-kumar — GitHub

Technical Skills

- **Programming Languages:** Scala, Python, Java, JavaScript, TypeScript, C++
- **Big Data Frameworks:** Apache Spark, PySpark, Hadoop, Hive, HDFS, MapReduce, Yarn
- **Data Pipelines Streaming:** Apache Kafka, Data Processing Pipelines, ETL/ELT Systems, Event-Driven Services
- **Databases Cloud:** MYSQL, Postgres,DBMS, AWS (S3, DynamoDB, Lambda, API Gateway)
- **Frontend Visualization:** React.js, Next.js, Redux, Tableau, Excel, Dynamic Data Visualization
- **DevOps Tools:** Git/GitHub, CI/CD toolchain, Jenkins, Docker, Kubernetes, Postman, Jira
- **Core Strengths:** Process Optimization, Unit Testing Validation, Root Cause Analysis, Requirement Understanding

Professional Experience

Associate Software Engineer — September 2024 – Present
ACCENTURE

(I) Distributed Data Pipelines & Reliability Engineering 2024–Present

- **Engineered High-Throughput Data Pipelines:** Architected distributed data processing pipelines using Scala and Apache Spark, successfully handling large-scale datasets up to multiple TBs and achieving a 35% reduction in processing cycle runtimes.
- **Optimized Process KPIs System Audits:** Established automated performance tracking monitors and data validation frameworks, resolving data bottlenecks to boost systemic system efficiency by 25% and ensure 99.8% data accuracy across target schemas.
- **Accelerated Architecture Deployment Velocity:** Integrated enterprise CI/CD pipelines with storage targets including AWS S3 and MySQL, raising automated build-test-deploy delivery frequency by 40% while eliminating manual data synchronization delays.
- **Advanced Big Data Capabilities:** Successfully implemented optimized storage and processing structures utilizing Hadoop, Hive, and PySpark, improving complex aggregations and storage resource allocations by 20% for downstream reporting

STEALTH STARTUP (FINCORE.AI)

(I) Data Integration & Full-Stack Financial AI Systems 2024–2024

- **Synthesized Heterogeneous Data Ecosystems:** Developed ingestion wrappers to source, clean, and validate data across distributed platforms including Oracle, Teradata, and Hadoop (HDFS), consolidating disparate schemas to increase overall analytical query response speeds by 30%.
- **Implemented End-to-End Testing Validation:** Formulated regression and data integrity validation test suites, validating calculation accuracy for financial reporting models and slashing systemic processing anomalies by 45%.
- **Built Dynamic Real-Time Dashboards:** Connected backend data streaming with frontend consumer layers, implementing highly responsive, dynamic data visualizations in the React.js UI to render financial insights seamlessly

Contributions and POCs

AI-Powered API Testing Automation Jul 2025 – Aug 2025

- Built a custom automation solution using Flask, OpenAI to streamline API testing, reducing manual effort by 70%.
- Contributed in developing a python service to parse the swagger file and use OpenAI to create multiple test cases.

Cyber Security CTF Platform Hackazon | Mar 2025 – Apr 2025

- Deployed 15+ CTF challenges on production platform, engaging 5k+ students in cybersecurity training.
- Built secure authentication with Flask-Login and RBAC covering OWASP Top 10 vulnerabilities.

Apache Ignite Distributed Caching POC | Nov 2025 – Dec 2025

- Designed in-memory caching system handling 1M+ records with 5x performance improvement over database queries.
- Implemented cache-aside patterns achieving sub-10ms latency for frequently accessed datasets.

Education

Sir Mvit Dec 2020 – Jul 2024
Bachelor of Engineering in Electronics and Communication Engineering
